

Hello McDonald's.

Dynamic Yield Cross-sell and Upsell | Discovery.

July 8, 2021

**Create more opportunities to integrate
Dynamic Yield (DY) into the Kiosk via cross-sell
and up-sell flows.**

Up-sell and cross-sell opportunities exist throughout the customer flow, with different pertinence for different customers.

Smarter customization.

Nicole's dinner at home.

“Show not just what we suggest, but why.” - Erik

“Scrolling is something we're considering more, but should vet in user testing.” - Zeke

Impulse purchase.

Denise's solo lunch out.

“If we can keep this super fast, and zero friction... pretty exciting.” - Erik

“Customers are telling us in other work streams that they don't care what other people are buying.” - Joe

Designed interruption.

Steve's caffeine fix.

“No pop-ups, modals only.” - Venkatesh

“A carefully curated option... Explain why we are showing this to personalize it.” - Erik

High-level plan.

Testing timeline dependent on research scope

What you'll see today.

- Translation of requirements and flows (with feedback incorporated) into designs and an initial prototype.
- Informed by our 7/1 review, which included:
 - Current state assessment.
 - Competitive research.
 - Prioritized user-based occasions.

What's next.

- Next review currently slated for Monday, 7/19
- Revision of future state cross-sell and up-sell flows and prototypes based on feedback from today's meeting and technical feasibility feedback (to be provided).

Feedback guidance.

Current state cross-sell

- Is the prototype accurate? Does it reflect the functionality of cross-sell on kiosk today?
- Detailed design feedback is welcome.

Future state cross-sell and up-sell

- Do you agree with the overall flow and user experience being explored?
- These designs are lower-fidelity, and thus will not be ready for detailed design feedback until our next round of review.

Upsell scenario.

Smarter customization // Dinner at home together.

Nicole is on her way home from work when her husband calls. He picked up the kids from their after school activities, and doesn't want to cook. He mentions their daughter is craving a Happy Meal, so Nicole swings into McDonalds and picks up some dinner on the way home.

As soon as she starts adding a happy meal, the kiosk recognizes that this is a meal for a family with children. It elevates helpful options like upgrading to a family meal, removing onions, and adding kid-friendly items.

Its a complicated order: No onions for son, and extra pickles for Dad. Still in a few moments, Nicole is on her way home, a dinner hero— With a couple extra treats for her family.

Wireframes and flow.

Home (Logged in)

PDP

Meal Review

Nicole receives a recommendation based on her history of ordering kids meals.

Having selected an item for kids, her shortcuts are tailored to kid-friendly options.

During customization, she is presented with personalized add-on recommendations.

Home (Not logged in)

Personalized drawer

- For a logged in user, the title of at least one drawer should be dynamically populated with a keyword pulled from DY's profile of this user.
- The contents of this drawer should be populated in order of DY's confidence / relevance score.
- In the event that a food item would appear multiple times on this screen, the topmost drawer takes priority and the item should be suppressed in all other drawers.

PDP

Dynamic Shortcuts

- The contents of the shortcut drawer should be populated and prioritized by DY (e.g., a person who seems to be ordering for kids should have kid-friendly items elevated.)
- The first visible shortcuts should always include at least 1 upsell, and at least 1 free customization.
- DY-populated shortcuts with a high degree of confidence should be visually highlighted with a very short description of why they were recommended (e.g., ‘Your Usual,’ ‘Spicy,’ etc.)

Shortcut Carousel

- Tapping an arrow should rotate the carousel to the next set of N items in the indicated direction.

Goes well with your meal

PDP

Suggested Sell Drawer

- On user arrival, drawer should animate up and in.
- Drawer should exclude items of the currently selected item's category (e.g. when viewing a primary meal item, only sides should appear here.)
- On tap, an item should be added to cart instantly without the opportunity to customize.
- On tap, drawer items should appear in a 'selected' state and affordance should change to 'remove.'
- On second tap, the item should be instantly removed from the cart and affordance reverted.

Dynamic Suggested Sell Titles

- The text content of a suggested sell drawer should be dynamically populated by DY to indicate why it was populated (weather, preference, etc)

Impulse purchase // A quick solo lunch out.

Denise has been working hard on a project, and is starting to feel a bit fuzzy-headed— Sure enough, it's lunchtime. She's ready to get outside for a bit and treat herself.

At the kiosk, she gets herself a burger and makes it a meal— Her usual routine. At the order review screen, as she's about to hit checkout, she sees a suggestion: “Hey, it's cold out there! Tap here to add a baked apple pie.”

Denise hits the button, instantly adds the treat to her order, and checks out. She takes a seat and enjoys some relaxing me-time. Soon enough, she's feeling recharged and ready to head back and knock out that project.

Wireframes and flow.

Home (Not logged in)

Order Review

Denise grabs a typical lunch item, which has been elevated to the top of the screen.

At checkout she is enticed with a targeted item, which she adds with a single tap.

Home (Not logged in)

Suggested Sell Drawer

- For an unknown user, the title of at least one drawer should be dynamically populated with a keyword pulled from DY’s profile of current trends.
- The contents of this drawer should be populated in order of DY’s confidence / relevance score.
- In the event that a food item would appear multiple times on this screen, the topmost drawer takes priority and the item should be suppressed in all other drawers.

Impulse element

- The impulse purchase element should only be displayed to customers with a cart interpreted by DY as a solo meal.
- The text accompanying the impulse element should be dynamically populated by DY.
- The impulse element should animate in.
- The impulse element will contain a single item, populated by DY based on current trends.
- The impulse element will not recommend items currently in-cart.
- Items in the impulse element will be added to cart with a single tap, animating into cart and dismissing the impulse element.

Designed interruption // Morning caffeine fix.

Steve is on his way to the office. He knows he has a big presentation today and wants to make sure he starts his day off right. As he heads towards work, he pulls into McDonald's to get his to-go coffee.

H

As he mashes the recent orders button, an item pops up and catches his attention— Some hash browns. Steve pauses, and adds it to his default order with a single tap and checks out.

Steve pulls in to the office lot, and pauses to eat for a few mindful minutes. With not only caffeine fix managed, but some light breakfast and a few minutes of focus, he's starts the top of his day at the top of his game.

Wireframes and flow.

Home

Modal takeover

Steve selects his habitual item from his recent orders.

He is shown an interstitial modal takeover between adding the item, and checkout.

Modal takeover

Modal takeover

- The modal should feature a single, high-confidence item populated from DY.
- For a logged-in user, the user's name should appear in the descriptive text.
- A user should be able to add this item to their basket in one click.
- A user should have the ability to request to not see this particular combination of food items in the future.
- On tap, 'Stop showing me this' should visually acknowledge the user's action before advancing to checkout.

Milestones & next steps.

- **Week of 7/12:**
 - Research planning session.
 - Initial extended stakeholder reviews.
- **Monday, 7/19:** Future state prototype review.
- **By Friday, 7/23:** Hand off prototypes.
- **Week of 7/26:** Conduct testing.

Done.

Designed interruption.

Reorder / Favorites.

This moment represents an automatic customer behavior with low cognitive load.

We have an opportunity to intervene in this moment with additional DY-targeted options, increasing check size and collecting customer data.

Smarter customization.

PDP / Customize.

This screen appears to be underutilized from a cross/upsell perspective.

We have an opportunity to deepen the set of customer options, take a more visual approach, and make better use of the kiosk's real estate.

Impulse purchase.

Order review.

The textual 'Order More' button leads the user to re-enter the full choice loop.

Offering one-click add-on features here could capitalize on impulse buys, increasing ACS without diverting customers from checkout.
